599 Additives In Tobacco

Wow. 599 additives. Think about that for a moment. This means that there are 599 ingredients that have to be **ADDED to natural tobacco** in order for it to become a 3 1/4 inch long toxic nicotine delivery system.

Don't get me wrong. It has me coming back from time to time also. But think about this, "what keeps you coming back and why is it so hard to quit?" Well, the short answer is of course the nicotine. The nicotine is the hook in the jaw that keeps smokers coming back for those 599 extras. It is those 599 extras that can also end up killing you. It is not the nicotine. It all that other crap that gets stuffed in there for "your smoking pleasure".

**Electronic Cigarettes Delivers The Pleasure Of Smoking
Without the 599 additives,
nor the 5000 chemicals
you get from burning those additives**

The list of 599 additives approved by the US Government for use in the manufacture of cigarettes is something every smoker should see. Submitted by the five major American cigarette companies to the Dept. of Health and Human Services in April of 1994, this list of ingredients had long been kept a secret.

Tobacco companies reporting this information were:

- American Tobacco Company
- Brown and Williamson
- Liggett Group, Inc.
- Philip Morris Inc.
- R.J. Reynolds Tobacco Company

While many of these ingredients are approved as additives for foods, they were not tested by burning them, and **it is the *burning* of many of these substances which changes their properties, often for the worse.**

According to Philip Morris' own website, almost 5000 chemical compounds are created by burning a cigarette, many of which are toxic and/or carcinogenic. *Carbon monoxide, nitrogen oxides, hydrogen cyanide and ammonia* are all present in cigarette smoke. Between 45 - 70 of these are known carcinogens and are found in mainstream smoke, second-hand smoke, or both.
